BDRShield for Google Workspace Backup & Recovery

BDRShield is a powerful and comprehensive backup solution designed to safeguard your valuable Google Workspace data. With BDRShield, you can automate backups, perform granular restores, and maintain data integrity, all while meeting compliance requirements and minimizing downtime.

BDRShield ensures that your Emails, Drive files, Shared Drives, Contacts, and Calendar events are securely backed up, easily recoverable, and protected against accidental deletion, data corruption, and cyber threats.

Direct-to-Cloud Backups

BDRShield Cloud

Utilize our reliable & secure BDRShield Cloud Storage

Bring Your Own Cloud

Use your existing Private/Public Cloud Storage

Amazon S3 | Azure Blob | Google Cloud | Wasabi
Backblaze | MinIO | Other S3 Compatible Storage

Key Features

Domain or User-Level Backup

Configure backups for either the entire domain or specific user accounts, allowing for flexible protection of single or multiple Google Workspace domains.

Google Drive Backup

Backup all Google Drive data including documents, folders, photos, and videos, with options for automated daily backups for individuals or the entire organization.

Google Calendars Backup

Automatically backup calendar items such as events, meetings, and appointments, ensuring no manual intervention is required.

Google User Mailbox Backup

Customize your backup to include all user mailbox data or select specific items, with flexible retention policies and schedules to meet your needs.

Google Contacts Backup

Securely backup and store your Google Workspace contacts, with options to restore entire lists or selected contacts and export them in Vcard format.

Google Shared Drive Backup

Choose to backup either all available Shared Drives or specific ones, providing tailored control over your crucial data.

Granular-Level Recovery

Restore an entire mailbox or individual items from Gmail, Drive, Contacts, and Calendar, ensuring minimal downtime and swift recovery.

Flexible Storage Options

BDRShield Cloud supports a variety of backup targets, including BDRShield Cloud S3, Wasabi, and public clouds like Amazon S3 and Google Cloud, allowing you to scale storage as needed.

Cross-User Restore

Restore backup data to the same or different user mailbox within same or different organization

Export Data

Export the backups in the any format you need - EML, PST or download locally.

Data Retention & Compression

Enhance backup efficiency with default compression and customizable retention settings tailored to your needs.

Preview Mails

Preview emails and their attachments before restoring, with options to view and recover backup data across Google accounts.

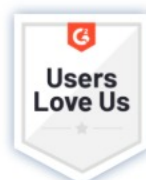

Flexible Scheduling

Configure backups with various frequency options and customizable retry settings to ensure optimal data protection.

Reliable Reports

Receive detailed reports on backup and restore activities, including user statistics, backup size, and duration.

Highly Rated
Backup Solution by Customers,
MSPs, Channel Partners

“

We use BDRSuite for backup purposes and provide backup as a service to our customers. My company has been able to create a good income with a relatively small investment in BDRSuite. The flexible hybrid solution that BDRSuite provides along with reasonable pricing made us decide for this product instead of its competitors.
